**V2 Technology, a Northeast Ohio Company, Part of Team that Wins
NASA Safety Center Contract**

(CLEVELAND) – V2 Technology, a specialized IT consulting firm, is proud to announce it was part of the winning team awarded a five-year, \$24 million contract to provide technical support services to the NASA Safety Center (NSC) located at the Glenn Research Center (GRC) in Cleveland, Ohio.

The NSC serves as a resource for all NASA centers and facilities—providing safety and mission assurance expertise, information, verification, and analysis to enable collaboration and learning, while promoting a safe workplace and successful programs and projects.

“V2 is very pleased to be supporting NASA, one of the premiere and historic scientific research agencies in the world,” said Patrick Golembiewski, Founder and CEO of V2 Technology. “Working to support the scientific and strategic missions of this agency is a source of pride for all our employees.”

Through the contract, V2 will support the NSC and Banner Quality Management, Inc., by providing technical support services for training and development, information dissemination and knowledge sharing, operational support of information technology systems, mishap investigation, data mining analysis and trending, and project management.

V2 was chosen for the NSC contract based on the company’s IT strengths and capabilities, and previous experience working with NASA. V2 has worked with NASA since 2010, delivering IT services and support to the NSC and GRC in a variety of areas. V2 is also part of the team awarded a five-year, \$110 million contract with the NASA Glenn Research Center in 2014.

“As a company based in the Cleveland area, it has been our great privilege to serve our local neighbors at the Glenn Research Center,” said Golembiewski. “It has also been a fantastic opportunity for us to demonstrate the great value V2 provides. Successful execution of this latest contract will help position V2 for additional opportunities with NASA and other government entities moving forward.”

###

About V2 Technology

Since 2004, V2 has been serving the Information Technology needs of government and commercial clients from our Cleveland, Ohio, headquarters. From facilitating business processes and implementing automated solutions to workforce scalability, talent sourcing and application development, V2 provides IT strategy and execution to help you achieve your specific goals.
